Experience

Software Development Engineer Nov 2024 – Present
Amazon *Seattle, WA*

- Leading low-level design of a new external-facing web platform, built from scratch on **CloudFront**, **Lambda@Edge**, **AWS WAF** and a reverse proxy, for a **40x traffic scale-out**; chose the WAF rules and ran them in count mode to tune on live traffic, and made tenant onboarding a code-reviewed change.
- Kept users signed in across domains without **third-party cookies**: paired a client-side iframe cookie handoff and redirect with backend account-ID linking and an async session tie on landing, after a deep study of SameSite and storage partitioning.
- Cut page-load latency on a **300+ tenant** webpack **Module Federation** micro-frontend platform by consolidating chunks to remove extra requests; mapped share-key resolution and benchmarked every configuration in **Playwright**, shipping only options proven safe.
- Drove dark-mode theming across **89 tenants**; designed a **Lambda@Edge** cookie rotation that cut theme propagation from **15 minutes to seconds** and raised CloudFront cache hits from 8% to 9.3%; root-caused a cross-tenant CSS bleed in a legacy Ruby asset gem.
- Migrated Amazon A to Z employee sign-in (**hundreds of thousands of users**) from native iOS/Android to **React Native**; owned 8 accessible auth screens and a typed wrapper for 100+ metrics; **4x faster releases**.
- Architected a **two-person review (2PR)** authorization workflow as an isolated package, choosing polling over push and WebSockets; closed the security finding that blocked rollout to the US and 12 EU countries.
- Delivered identity internationalization for a **59-country** expansion: email templates in **27 languages** (108 files), per-country feature gates and SES delivery proofs, with **zero launch incidents**.
- Primary on-call for **SEV-2** incidents; authored **211 code reviews** across 46 packages, reviewed 465+ from 30+ engineers, ran 18 production deployments, and led Secrets Manager remediation for 25+ tenants.

Software Engineer Intern May 2024 – Aug 2024
Prognostic Optimization Group *Remote*

- Built a responsive marketing site from **Figma** designs in **React** and **Tailwind CSS**, increasing mobile traffic.
- Designed the **PostgreSQL** schema and **SQLAlchemy** data layer for a **Flask** backend; added **JWT** auth.

Software Developer – AI Trainer (Contract) Jun 2023 – Oct 2024
DataAnnotation *Remote*

- Evaluated and refined **LLM**-generated backend and data-visualization code for correctness and quality.

Projects

Azelify | *TypeScript, React 19, Bun, Hono, PostgreSQL, Drizzle, Stripe* In development

- AI video editor you direct in conversation: prompt to shot plan, editable timeline, captions and publishing.

Exva | *Electron, React, TypeScript, Bun, SQLite, Alpaca API* Desktop app

- Paper-trading bots that log the exact numbers behind every decision; backtests run the live trading code.

@atchonk/ai-receptionist | *TypeScript, OpenAI, Twilio, Postmark* Published on npm

- Open-source AI receptionist SDK: answers calls, texts and email, books appointments, remembers customers.

Education

Purdue University Northwest Hammond, IN
Bachelor of Science in Computer Science, GPA: 3.87 *Aug 2021 – May 2024*

Technical Skills

Languages: TypeScript, JavaScript, Java, Kotlin, Swift, Objective-C, Python, SQL, Ruby, Rust, C++, Bash
Frontend & Mobile: React, React Native, Next.js, Angular, webpack, Module Federation, iOS, Android, accessibility
Backend: Node.js, Bun, Hono, Java Spring Boot, Flask, REST APIs, GraphQL, AWS Lambda
Cloud & Infra: AWS (CloudFront, Lambda@Edge, WAF, IAM, Secrets Manager, SES, CDK, CloudWatch), Azure
Databases: PostgreSQL, MySQL, DynamoDB, MongoDB, SQLite, SQLAlchemy, Drizzle
Testing & Tools: Playwright, Jest, JUnit, Cypress, Git, Docker, CI/CD, on-call, design docs, LLM APIs, MCP
